Sammy X-Press Revolutionizes Luminaire Fittings

ITW Buildex announces the introduction of the Sammy X-Press Lite, XP 200 to the existing Sammy Super Screw product line. The XP 200 allows the electrical trade to hang 1/4 - 20 threaded rod with direct vertical attachment in metal deck or thin gauge purlin where access to the back of the installed fastener is prohibited. XP200 and XP 35 are available for 3/8-16 threaded rod.

The X-Press anchoring system features an easy-to-install anchor with expanding anchoring strips that collapse to prevent pullout after installation. UL testing was completed to meet NEC standards. The system is UL Listed as a luminaire fitting anchor with a maximum load rating of 185 pounds in 22 gauge steel and maximum 250 pounds in a minimum 16 gauge steel. This system replaces costly trapeze applications in new and retrofit construction and eliminates the need for a retaining nut, while providing the performance values required by the electrical industry.
